

# Project Fact Sheet

## *Southeast Geysers Effluent Injection System (SGEIS), Phase 2, Basin 2000*

### GOAL

- To increase effluent wastewater injection to the Geysers geothermal steamfield for additional power generation.

### PROJECT DESCRIPTION

The purpose of this project is to extend the Phase 1 pipeline from the Lakeport Northwest Regional Treatment Plant to the Clearlake Southeast Regional Treatment Plant, and increase secondarily treated effluent injection volume in the pipeline up to design capacity. Phase 2 project addresses the serious decline of the Geysers reservoir geothermal resources that support power plant electricity production and will increase power output by approximately 10 to 20 MW.

### BENEFITS TO CALIFORNIA

This project will:

- Lower power generation costs due to fluid-use improvements that will enhance the competitiveness of several Geysers power plants, and extend the productive life of the steamfield.
- Increase power output by approximately 10 MW to 20 MW improve quality of injection fluid and steam, and reduce air pollution abatement costs.
- Maintain and strengthen California's

leadership in public/private geothermal partnerships between local communities and geothermal industry.

- Envisioned to create 130 construction jobs with a \$16 million payroll.
- Contribute \$1 million spent for construction-related local goods and services.
- Retaining 85 local jobs and enabling growth of 150 jobs per year.
- Local county revenues of \$150,000 annually through 2019.

## **FUNDING AMOUNT**

Commission	\$5.5 million
Match	\$22.5 million

## **PROJECT STATUS**

Completed.
